

PARTNERING FOR NETWORK DEMANDS

The Wing is a female-only co-working space that is designed to ignite the entrepreneurial spirit of women. It provides a working environment that sparks creativity and promotes empowerment. With more than nine locations in the U.S alone, The Wing provides its members with an open office space for daily work hours, as well as networking areas for events and more.

A co-working space must provide a "ready to work" environment to its members, inclusive of high-speed internet. To do so, The Wing partnered with Tekscope to build a network capable of supporting their growing member base and the abrupt WiFi demands, especially during work hours.

The project began to plan and design a wireless network that achieves the best coverage possible. Then, to identify the right access points that meet the shifts in demand without compromising service quality and speed. The Wing chose to use Cisco Meraki access points due to their efficient cost and flexibility. The analytics provided by these devices makes management and network optimization a much simpler, streamlined process.

By carefully listening to The Wing's growth goals, Tekscope was able to build a network solution that gave them the digital flexibility to scale their business. The digital-ready network that Tekscope designed for The Wing is an all-encompassing architecture with switches, firewalls, and access points. The entire solution not only works for current needs, but for increasing demands, as well. Additionally, the Network Managed Service Agreement covers the monitoring and management of the network, so Tekscope essentially becomes an extension of The Wing's IT team.

"Tekscope came to us like an answered prayer. Tekscope has truly helped scale our business. We have 6 remote locations and have expanded our HQ since our first interaction. They consistently provide excellent service, support, and attention to detail on everything they construct.

When it comes to tech and scaling a business, you need vendors that you can count on to go the extra mile. I consider the team at Tekscope to be a direct extension of my department and permanent members of our rapidly growing organization. I couldn't recommend a better company to handle your network and IT infrastructure needs" – **The Wing**
